

## Admiral

by designer Troels Bøgely

Model: KH-10  
Material: ceramic  
Installation: horizontal

### Installation of the uridan water free urinals is very simple.

If you retrofitting existing flushing urinals with uridan waterless urinals, please ensure that the sewer line is jetted and clean of uric scale before installation.

The uridan urinals work without water, and therefore should only be connected with  $\varnothing$  50 mm drainpipes. Installation should be carried out by authorized plumbers.

1. Take the height from the center of the waste pipe and mark the holes for both special screws No. (19). Drill holes and mount screws.
2. Insert extension pipe Pos. (D) on the 87 ° bend Pos. (C). Keep the distance of 100 mm from the wall to the middle of the pipe.  
If necessary, shorten the extension pipe. Place 87 ° bend with extension pipe on the drainage pipe.
3. Adjust fitting No. (15), mark holes, drill holes and mount fitting No. (15).
4. Remove the 87 ° bend with the extension tube and put it on the waste trap.
5. Put the urinal with the pipe on the outlet pipe. Lift the urinal and push it on both special screws No. (19).  
**Please note:** Between urinal and wall should be a gap of approx. 2 to 5 mm, so that tension cracks can be prevented.
6. Fill the waste trap Pos. (B) full with water.
7. Insert the stainless steel cover Pos. (A).
8. Pour 1 bottle uriLOCK ( 0,3 liter) over the cover.
9. Seal the gap between the wall and the urinal with silicone. **Please note:** Do not put any silicone on the lower tip of the urinal!
10. The uridan urinal is now ready for use!

**Please leave customer care booklet, cleaning and maintenance instructions and suction device with customer.**
